i2Print Website Proposal

Phase One: Discovery & Plan

Prepared for i2print inc., Long Island City, NY

Prepared by Daniel Raxa, RaxaRisk · daniel.raxa@raxarisk.com

October 2026 · Draft for discussion

What we heard

From our first conversation, here's what you want the website to do. Please correct anything we got wrong.

Bring more people to i2print.com, especially local businesses in Queens and NYC

Make it easy to shop and order prints online

Fix customer files automatically. When an uploaded image is the wrong shape or size for the product, help the customer fix it before it reaches your team.

Stay in touch with customers through a newsletter and occasional discount emails

Move to a platform you control. You're ready to leave your current store platform. We'll plan the move so nothing breaks along the way.

What already works

You're not starting from zero. Your site already has the hard parts of online printing:

- A **working online store** (we believe it runs on OnPrintShop) with cart, checkout, and Apple Pay / Google Pay
- **File upload, an online design tool, and templates**
- **PDF proofs** before production
- A **distinctive logo**: a stopwatch with a color-wheel face, plus "service. speed. success." in cyan, magenta and yellow ink. Speed, color and print in one mark.
- A broad product range: stationery, marketing materials, large format

---

We'll carry what works for your customers (online ordering, templates, proofs) onto a platform **you own and control**, and fix what's holding the site back.

What's holding the site back

From a review of i2print.com on October 20, 2026:

01 **Typos in the main banners.** The first thing visitors see reads "BUINESS CARDS" and "busniess cards". On a print-quality brand, that costs trust.

02 **Nothing shows you're local.** No shop photos, team, hours, map, pickup information or Google reviews, even though your tagline is "Everyone's local printer."

03 **Local search basics are missing.** There's no main headline tag, the page title is generic, the description never mentions Long Island City, Queens or NYC, and there's no local business markup for Google.

04 **Prices are hidden.** Only 4 of about 20 products show a starting price, and customers must create an account before ordering.

05 **File specs aren't published.** The FAQ gives 300 dpi and accepted file types, but bleed and safe-zone sizes aren't listed.

06 **The newsletter gives no reason to join.** It offers "hints, tips and the latest product news" with no offer attached.

The opportunity: own "local and fast"

National printers (Vistaprint, MOO, UPrinting) win on price and polish. Most local shops near you are quote-only or have dated websites. 4OVER4, with a Queens hub, is the closest competitor offering "online + local."

Your opening: be the shop that combines easy online ordering with what the giants can't offer:

A real shop in Long Island City, with pickup on 24th Street (to confirm with you)

A person, and a smart tool, that checks your file before it prints

Turnaround times you can count on, shown on every product (with your real times)

Prices up front, the way buyers now expect

Concept: a new homepage

A first concept using your logo, colors, fonts and product photos. Nothing here is final. It's a starting point to react to.

- Address, phone and WhatsApp at the top of every page
- Headline: **"Queens' fast local printer."**
- "From $X" prices on every product
- Turnaround and pickup badges (filled in with your real times)
- A **Free File Check** section
- Space for real photos of your shop, presses and team
- A newsletter signup with a clear offer (using your existing first-order discount)

[Insert screenshot: 05-Mockup/screenshots/01-hero-desktop.png]

Concept: Free File Check (working demo)

A working demo is built and runs in the browser. A customer picks a product, drops in an image, and sees right away:

- **Size and real print resolution** (for example, "240 dpi, needs 300")
- **Shape mismatch** (for example, "off by 20% for a business card")
- **Bleed and safe-zone lines** drawn on a preview
- One-click fixes: **Fit** (keep everything, fill the leftover space with a matching color), **Fill** (crop to cover), or **Extend** (widen the background)
- A **print-ready file** to download at the exact size, with bleed included

---

In the full version, **Extend** uses AI to paint in a matching background. **Ground rules:** text and logos are never regenerated, low-resolution warnings are never hidden, and every fix goes to a proof the customer approves.

Proof of work: Commercial Crab Pots

commercialcrabpots.com: a website I designed, built and run for a commercial fishing-gear builder.

Built with Next.js, React and TypeScript, hosted on Vercel.

What I built for them	What it means for i2Print
A **3D product builder**: customers pick options and see the pot change	A **print options configurator**: size, paper, finish, quantity
A **guided quote request** with photo uploads, a branded PDF copy for shop and customer, and text alerts to the owner	**Quote requests and file uploads** that arrive complete, with an instant alert
An **AI assistant** that answers questions from the shop's own information	An assistant for "What's your bleed?" or "Can I pick up tomorrow?"
Analytics with privacy consent, local search setup, automatic content updates	Knowing which products and pages bring in orders
Automated testing and controlled releases: changes are checked before they go live	Your store doesn't break when we make changes

Phased approach

We move in stages, so your store keeps taking orders the whole time. Each phase ends with something you can see and approve.

01 **Discovery & exit planning.** Learn your business, confirm your current contract's timeline, check what data we can export, and choose the new store platform.

02 **Design.** Homepage and key page designs in your brand, with two rounds of revisions.

03 **New website, live alongside your current store.** A fast new site with local search pages and the Free File Check. "Order" buttons link to your current store until the switch, so nothing about your current setup changes yet.

04 **Store migration, timed to your contract.** Move products, pricing and customers to the new store one product family at a time, starting with business cards. Run both stores briefly, redirect every old page so Google keeps your rankings, and switch in your slow season.

05 **Email & Growth.** Welcome offer, "ready for pickup" and reorder emails, Google review requests.

06 **Ongoing care.** Updates, small changes, monitoring.

Recommended store platform: Shopify. It handles checkout, payments and card security, your team gets an easy admin, and the account is in your name. We'll confirm it fits your pricing in Discovery before anything moves.

Phase One in detail: Discovery & Exit Planning

What happens:

- A 60-minute working session at your shop, plus a short questionnaire beforehand
- A review of your current platform: what it costs, what it can and can't do
- Your real specs: turnaround by product, bleed and safe zones, resolution, pickup hours
- Look at your email list, Google Business Profile and reviews
- A review of your current contract's timeline (your attorney handles the contract itself)
- A check of what we can export: products, pricing, customers, orders, templates

What you get:

- A written **plan and sitemap**
- **Brand guidelines** for the website (voice, colors, type, photo direction)
- A **migration plan** and **platform recommendation** with costs and a timeline matched to your contract
- A **fixed price and timeline** for the next phases

Estimated length: about 2 weeks from kickoff (an estimate; it depends on scheduling).

Technology & AI approach

Website

- New website: Next.js on Vercel, the same stack as Commercial Crab Pots. Fast, secure, built for local search.
- Store: Shopify for products, checkout and payments, connected to the new website. Account in your name.

Free File Check

- Standard image tools check size, resolution, shape and bleed. This part is precise, fast and free to run.
- AI is used **only** to extend backgrounds or upscale, and always ends in a customer-approved proof.

Email

- Klaviyo or Mailchimp if your team wants to send campaigns themselves, or managed for you

How I work

- I use AI development tools (Claude Code, OpenAI Codex, Google Gemini) to build and review faster. Every change is tested and reviewed before it goes live.

Investment (draft ranges)

[DRAFT: Daniel to finalize before sharing]

Third-party costs are billed separately at cost and owned by you: Shopify plan and apps, email platform, and AI image credits.

Final prices are set after Discovery, once the scope is clear.

Phase	Estimated range
1. Discovery & Exit Planning	$750 – $1,500 (credited toward the build)
2. Design	$1,500 – $3,000
3. New website (live alongside current store)	$4,000 – $8,000
4. Store migration to Shopify	Quoted after the export review (estimated $5,000 – $12,000, depending on catalog and pricing rules)
5. Free File Check tool	$2,000 – $4,000
6. Email & Growth setup	$500 – $1,000
Ongoing care	$150 – $400 / month

Insurance & working together

RaxaRisk carries:

- Commercial General Liability: $1,000,000
- Workers' Compensation: Statutory, with Employers' Liability at $500,000
- Professional Liability / E&O: $250,000

Certificate of insurance available on request.

How we'll work:

- This is a proposal, not a contract. Scope, payment schedule, ownership of work, and limitation of liability will be set out in a written agreement before work begins.
- You own your domain, store, customer data and content.
- Payments stay inside your store platform. I never handle card data.
- We plan around your current contract's timeline and don't touch your current systems until access is formally handed over to you.

Next steps

1. **Book the Discovery session**, ideally at your shop
2. **Fill out the short questionnaire** (about 10 minutes)
3. I'll send a **fixed Phase One price** and a start date
