WEBSITE CONCEPT / 15 PAGES / WEBSITE & CUSTOMER JOURNEY

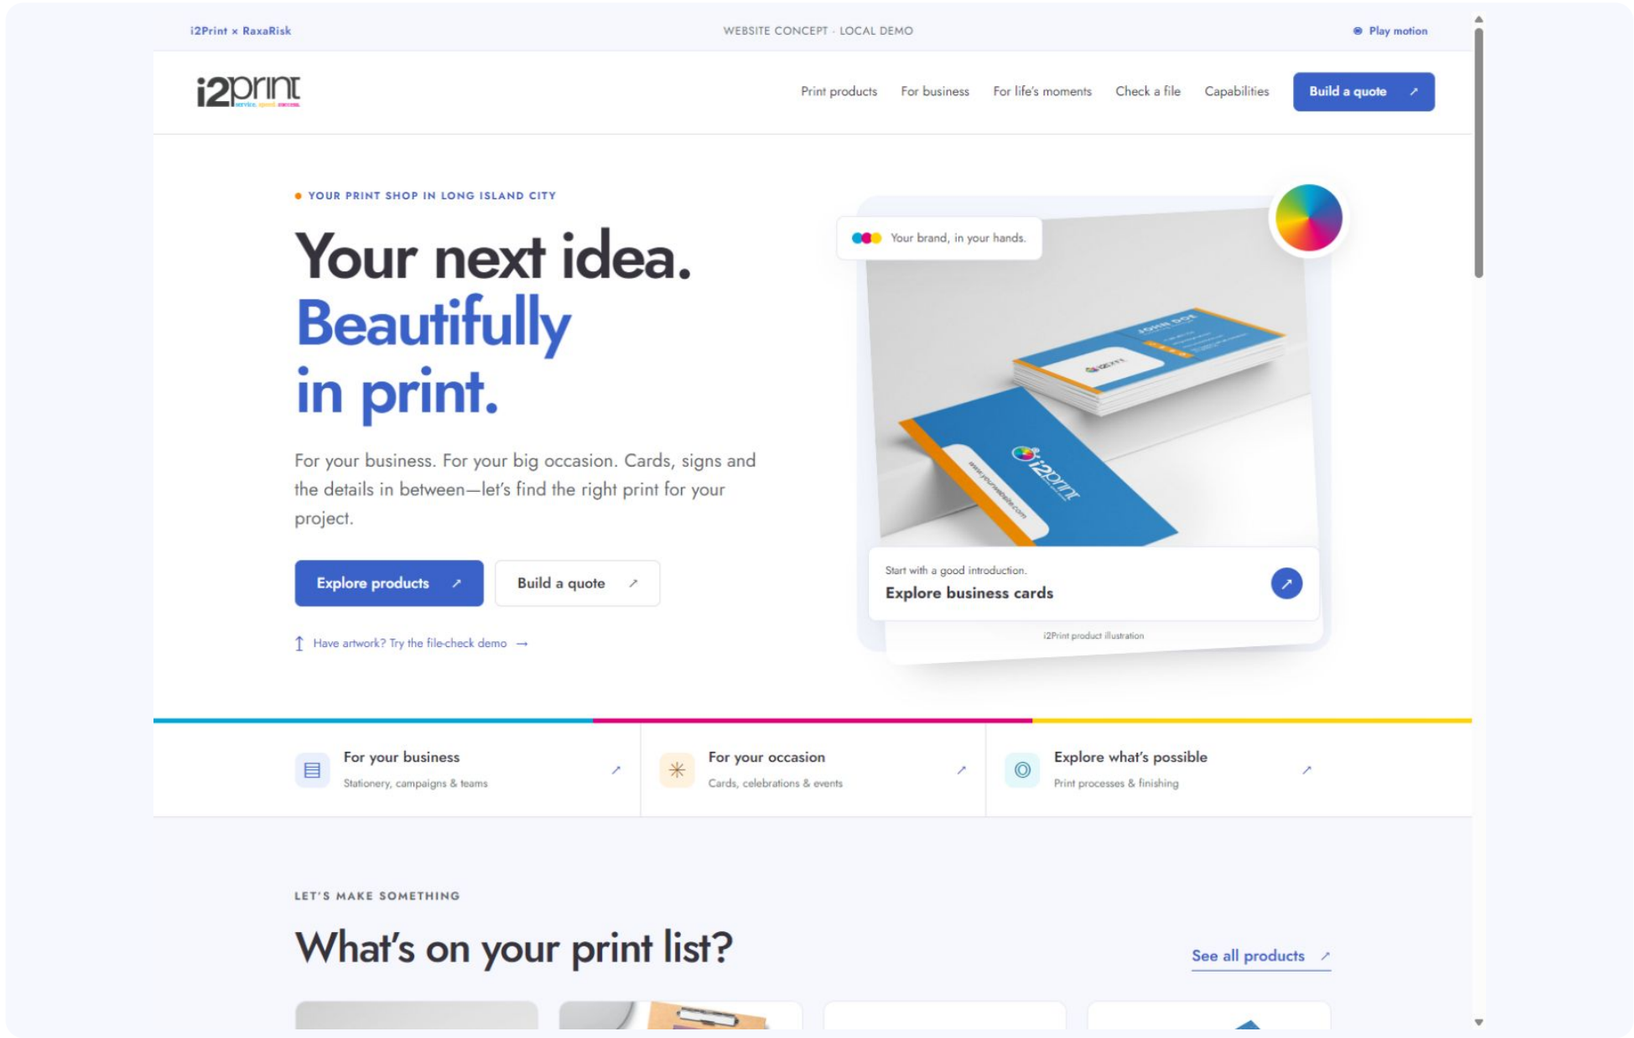

A clearer path from idea to print.

The next i2Print website

A visual conversation about browsing, quoting, checking artwork and reviewing proofs.

Prepared for Tom and Lindsay.
Built on the existing concept and initial strategic research.

PROPOSED
Design, product options and audience priorities need your input. The local interactions demonstrate a journey; no orders or production jobs are created.

SITEMAP / PROPOSED INFORMATION ARCHITECTURE

One connected customer journey.

01

Explore

Homepage + catalog

02

Choose

Cards or banners

03

Specify

Guided quote request

04

05

Review

Simulated proof

Customer entry points

Business printing

Personal and event printing

Shop and contact

Product browsing and guided quotes

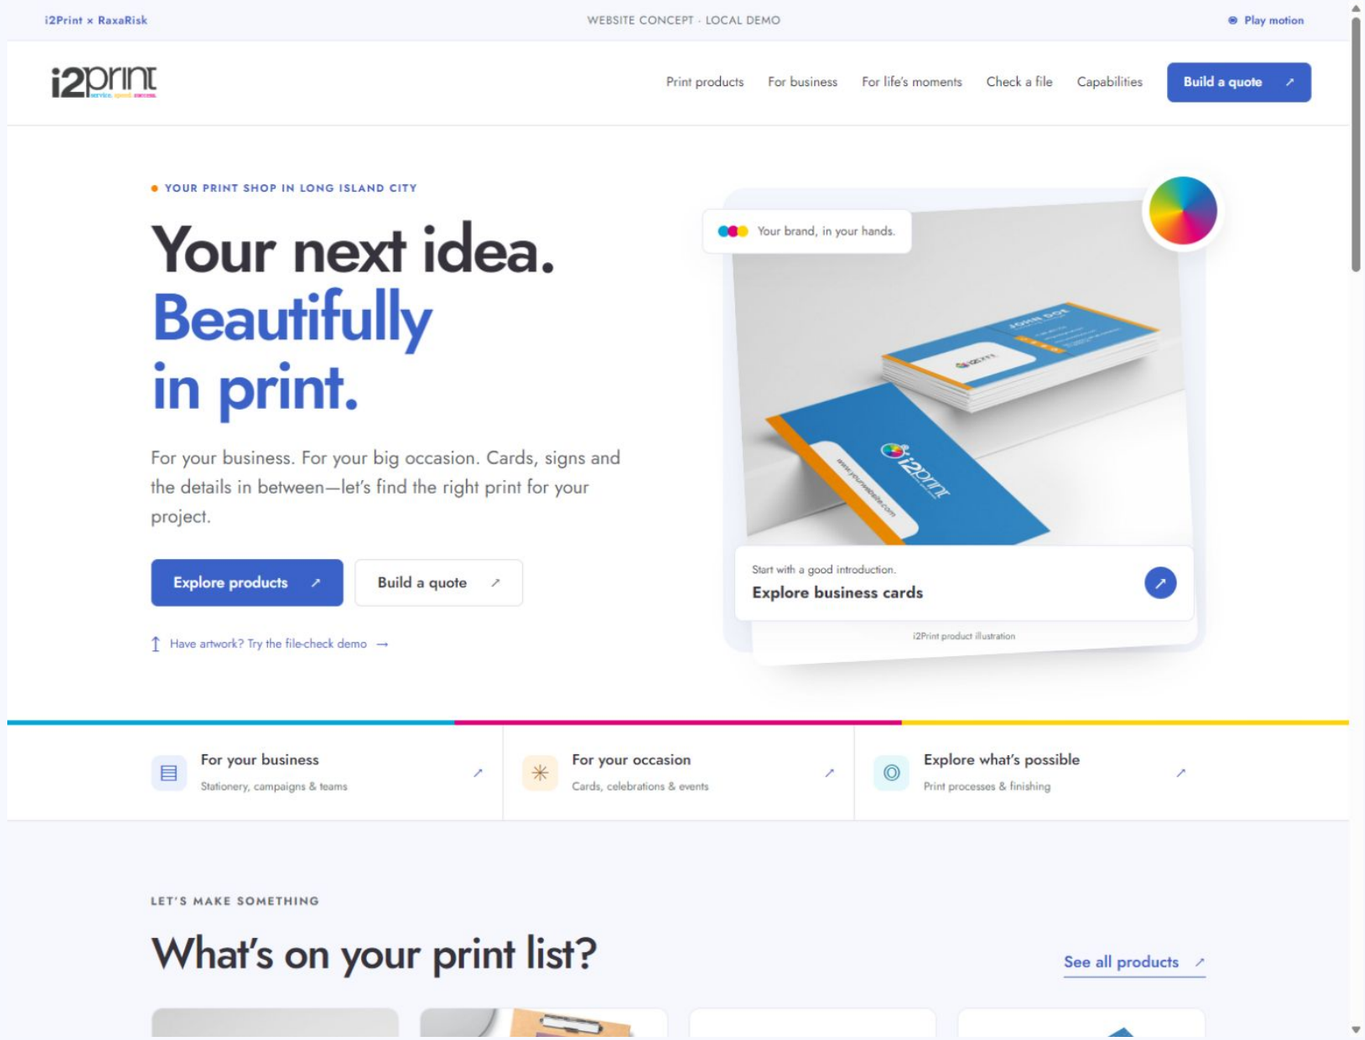

The shop stays part of the journey

Quote requests bring specifications together. Staff confirm materials, pricing, timing and fulfillment. A real proof decision and production release belong to a later, validated workflow.

OWNER-PENDING / Confirm the audience, navigation labels, product families and approval responsibilities during discovery.

WEBSITE CONCEPT / PROPOSED

Homepage / a direct invitation to start.

1 Two useful next steps

Browse products or begin a guided quote.

2 A recognizable identity

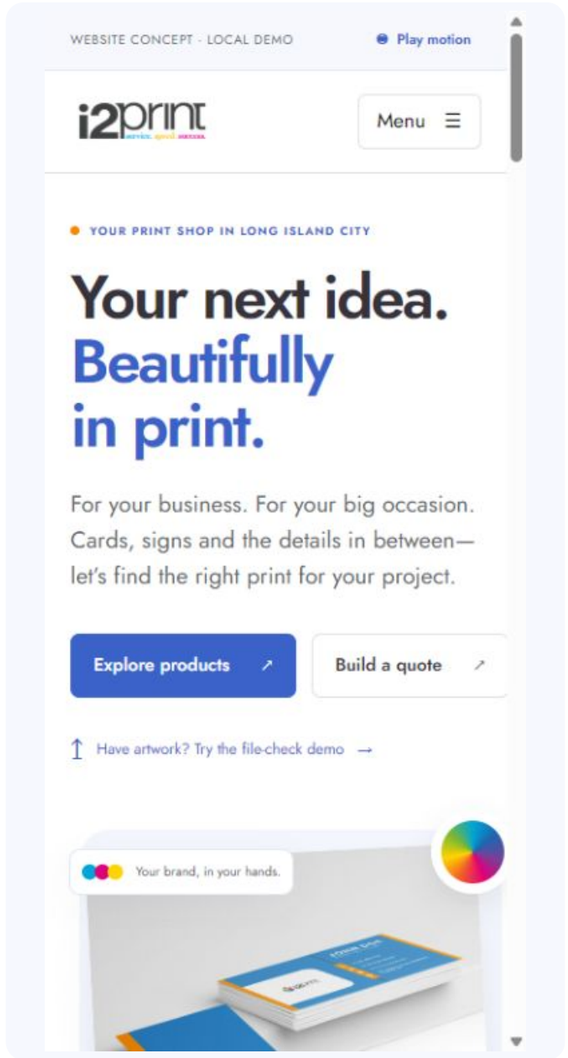

White background, existing logo, Jost, accessible blue, orange and CMY accents preserve the familiar identity.

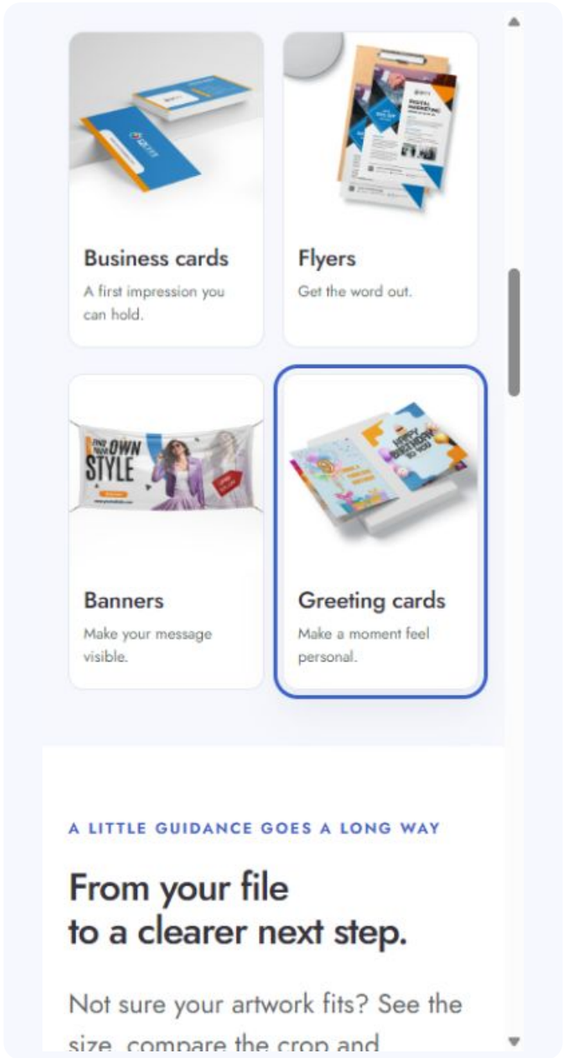

3 Product-led imagery

Existing i2Print artwork is used locally for discussion; production usage needs approval.

MOBILE / 375-PIXEL VIEWPORT

The same journey, sized for a phone.

1 A clear first choice

Large actions and a compact menu keep the entry point simple.

2 Products follow the story

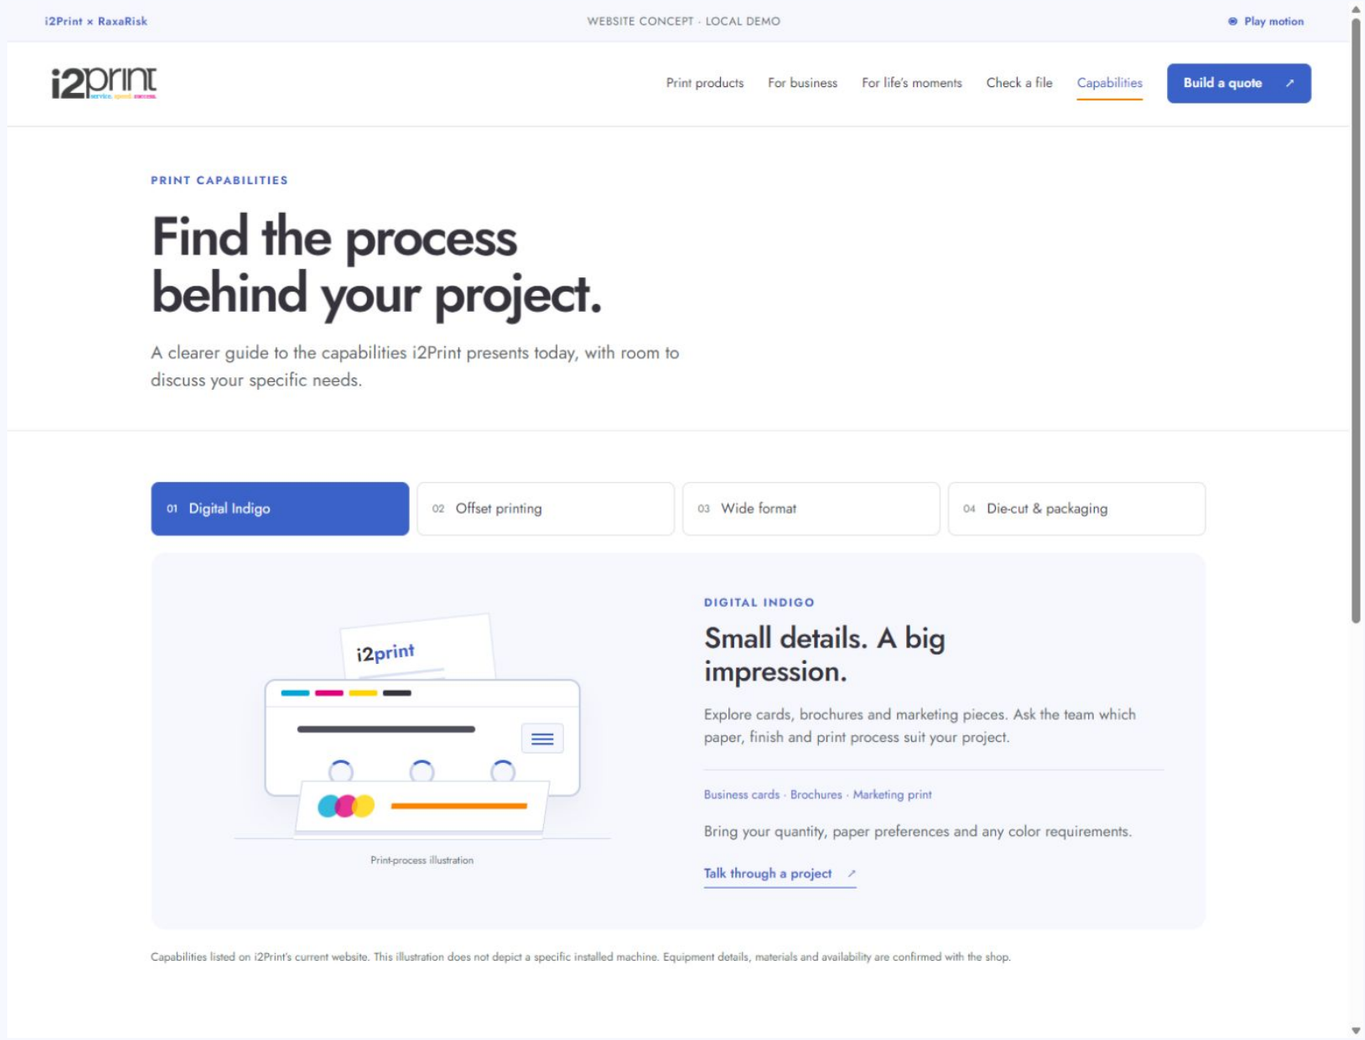

Stacked cards preserve the browsing sequence without horizontal scrolling.

3 Built for more than a mouse

Visible focus, native form controls and reduced-motion support are included in the local concept.

WEBSITE CONCEPT / PROPOSED

Capabilities / connect the process to the project.

1 Explain what the shop offers

Digital Indigo, offset, wide format and die-cut/packaging are advertised on i2Print's current About page.

2 Make the information useful

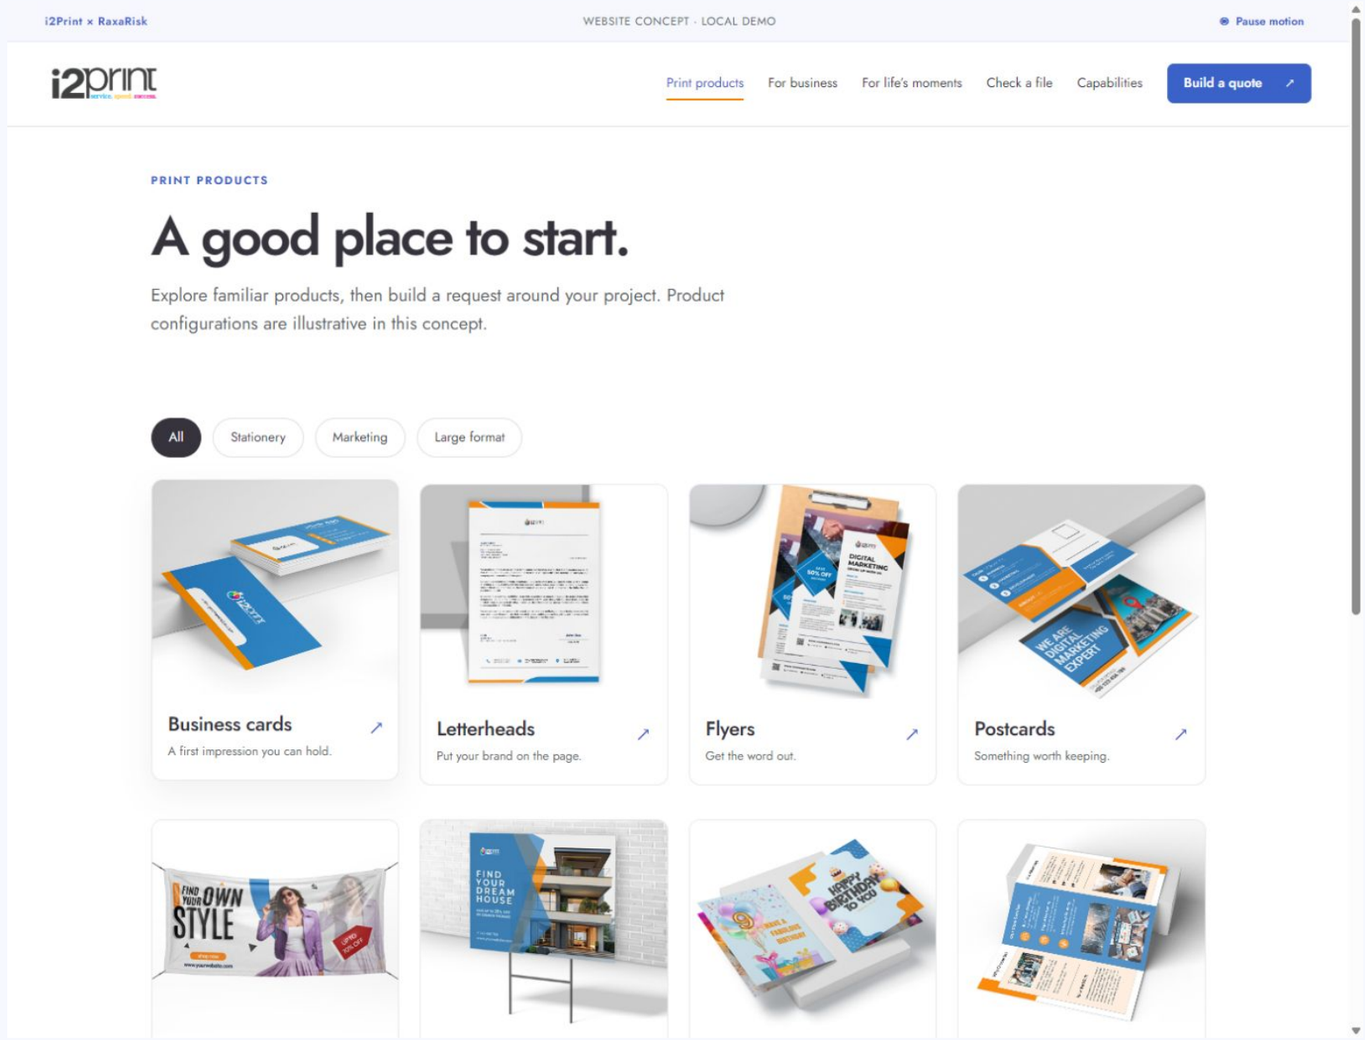

Interactive process choices explain project fit and the details a customer should bring.

3 Confirm the equipment story

The animated graphic is illustrative. Actual machines, materials, capacity and shop photography need owner approval.

WEBSITE CONCEPT / PROPOSED

Catalog / find the right starting point.

1 Browse by need

A compact product range and category filters make the next choice visible.

2 Go deeper where it matters

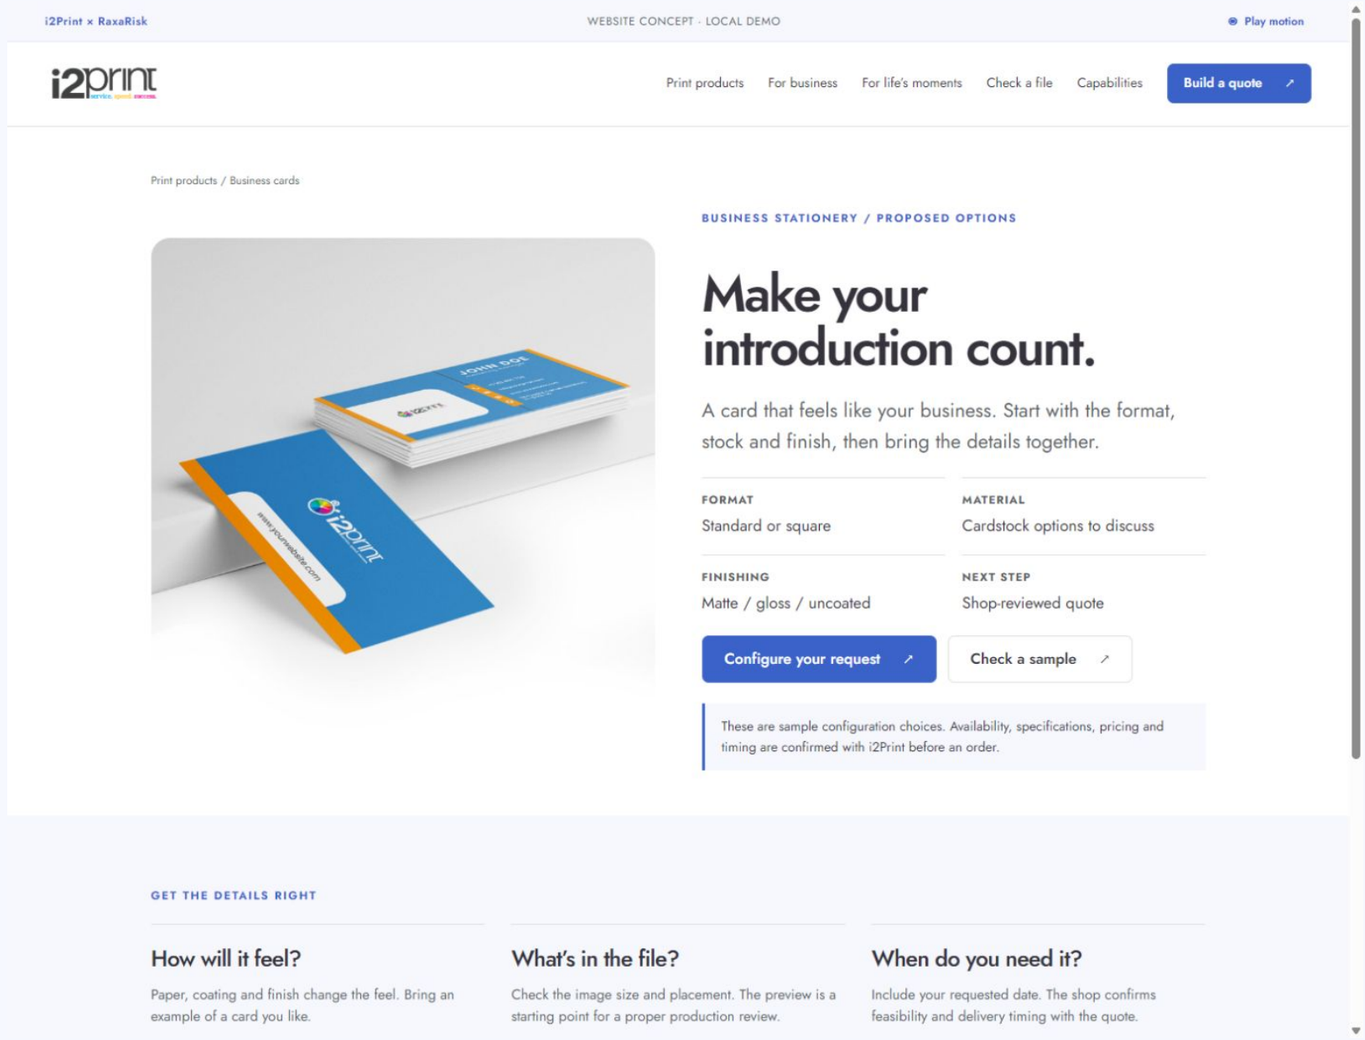

Cards and banners have detailed concept pages and quote paths.

3 Owner-pending

Confirm the launch catalog, product names and available variations.

WEBSITE CONCEPT / PROPOSED

Business cards / make the options understandable.

1 Show the product

Lead with the printed object and a clear purpose.

2 Explain the choices

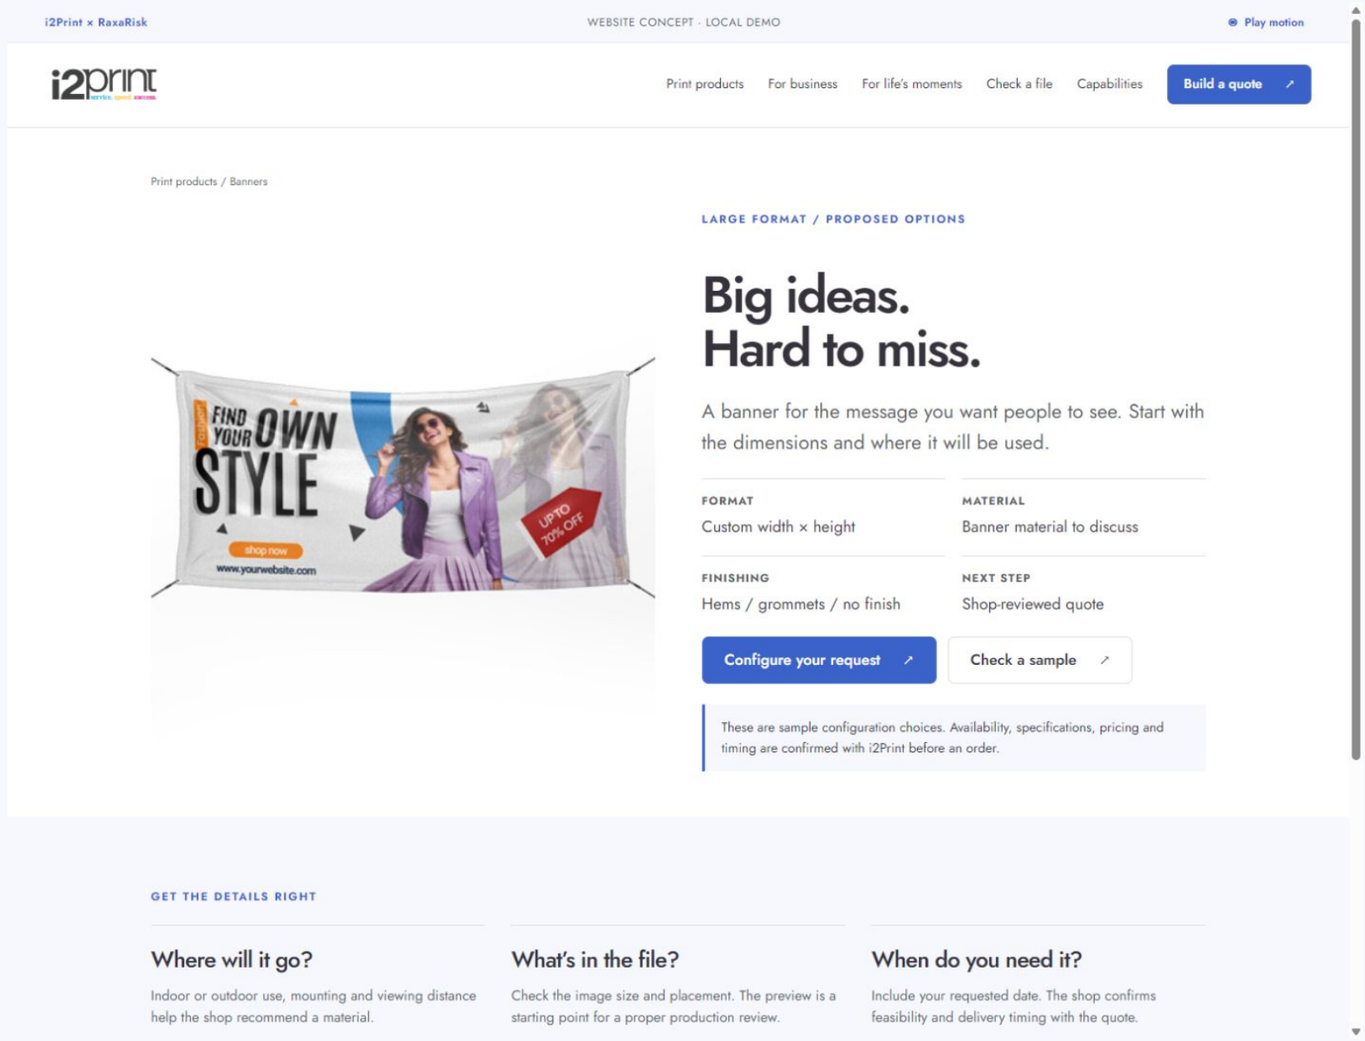

Dimensions, paper, sides and finishing lead into the quote request.

3 No premature promise

Illustrative options remain subject to shop confirmation; prices and turnaround are absent.

WEBSITE CONCEPT / PROPOSED

Banners / start with size and use.

1 Custom dimensions

A banner flow captures width and height in inches.

2 Useful production context

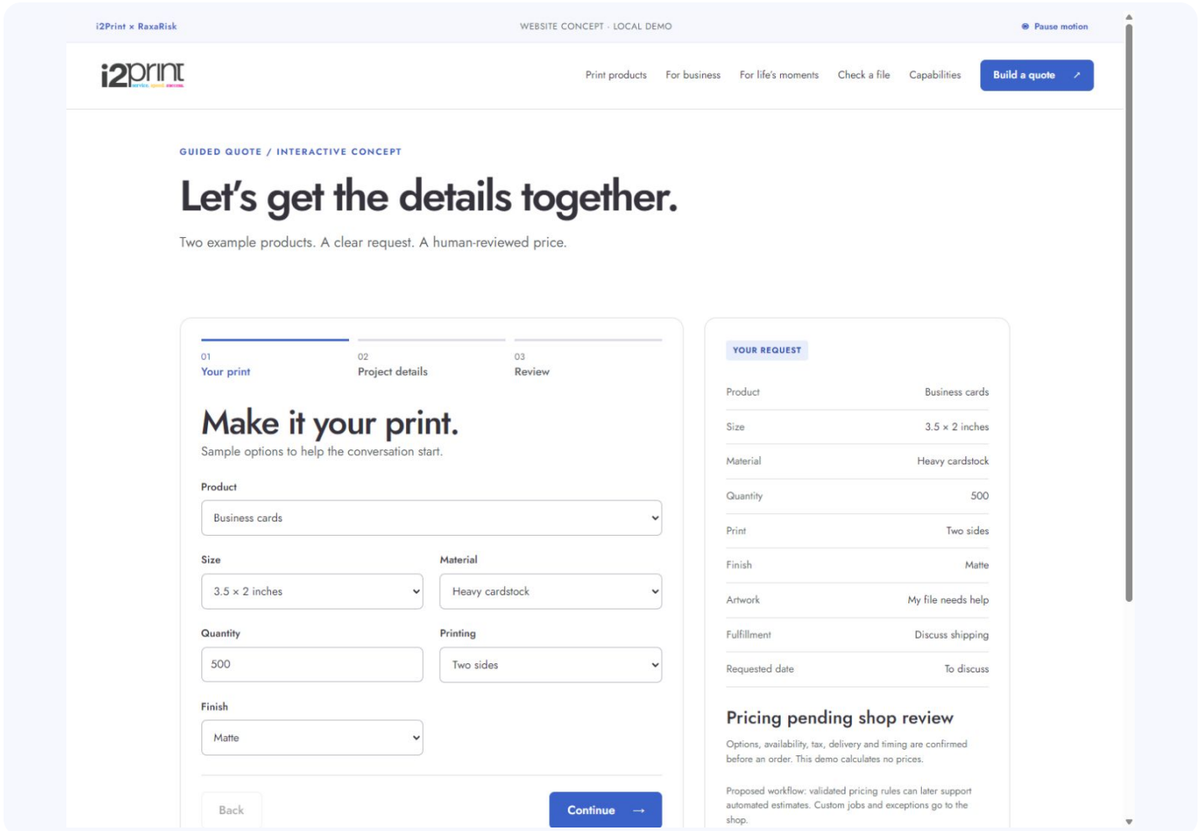

Material, quantity, finishing and artwork readiness travel with the request.

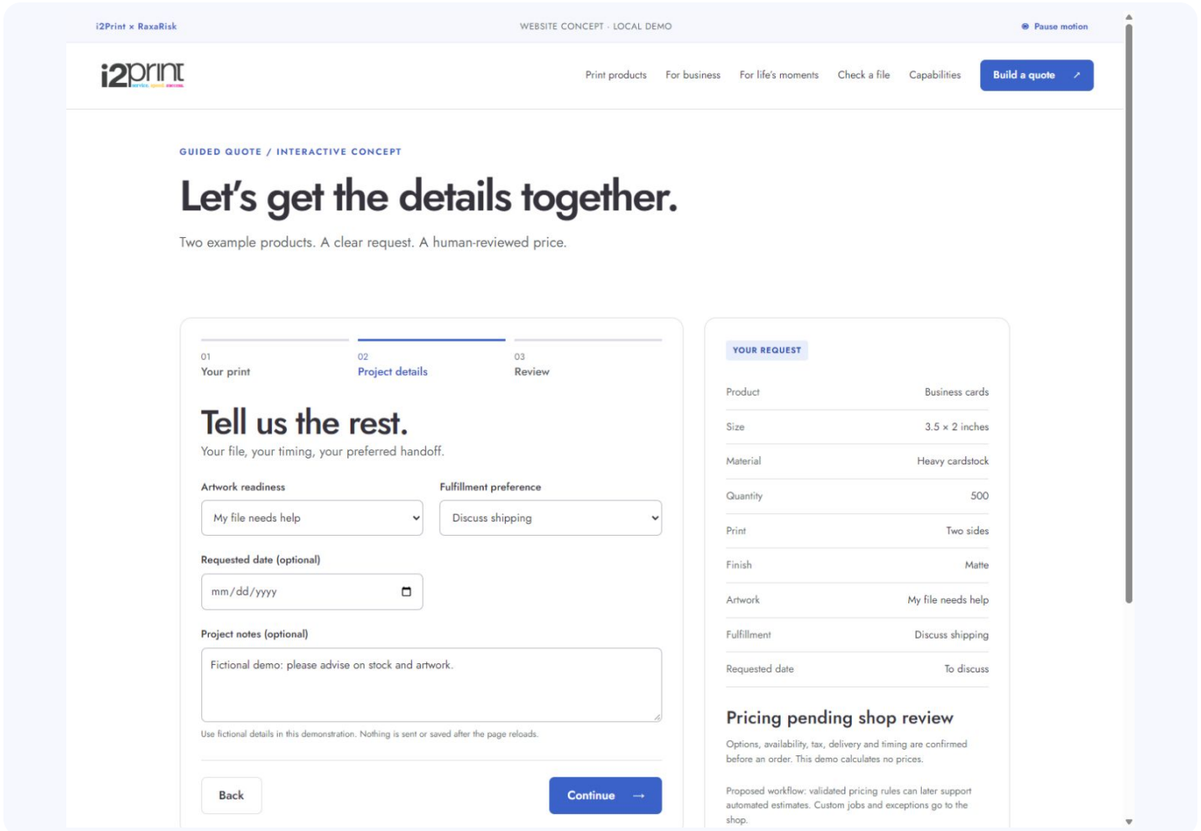

3 Validate before commerce

Test i2Print's hardest size-based pricing rules before choosing the store platform.

INTERACTIVE DEMO / SPECIFICATIONS PROJECT DETAILS

Guided quoting / enough detail for a useful conversation.

01 Your print

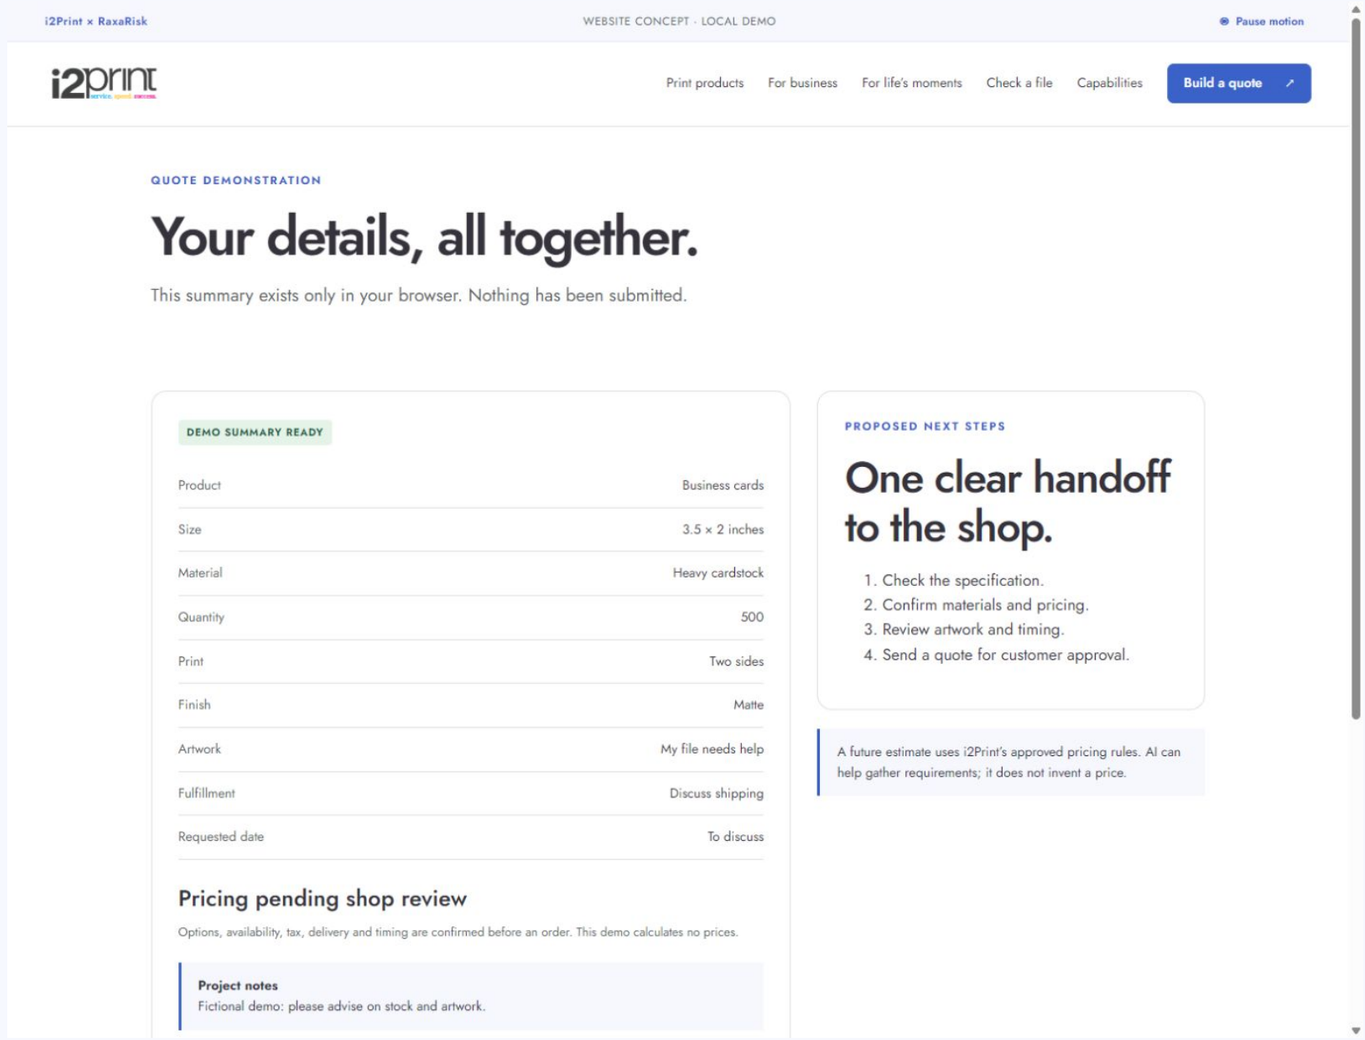

Choose the product, dimensions, stock, quantity, sides and finishing. Required values are validated.

02 Project details

Capture artwork readiness, pickup or shipping preference, requested date and project notes.

WEBSITE CONCEPT / PROPOSED

Quote summary / clear details, human-reviewed pricing.

1 Check before handoff

Selections are gathered into one reviewable request and can be edited.

2 Pricing remains pending

The demo calculates no price. Future estimates need approved pricing rules and exception handling.

3 Local demonstration

Nothing is submitted, emailed or stored in a customer account.

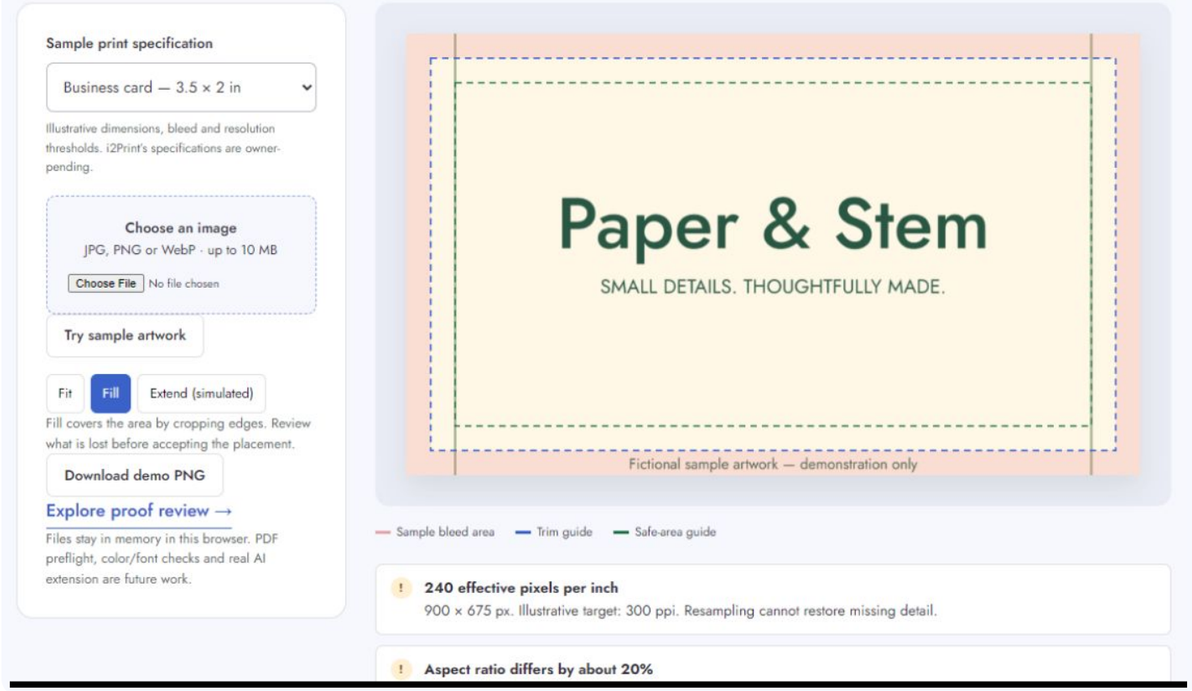

WORKING IMAGE DEMO / JPG · PNG · WEBP

File check / see what Fit and Fill change.

FIT / preserve the full image

The sample measures 300 effective ppi with padding. A matching resolution target does not certify production readiness.

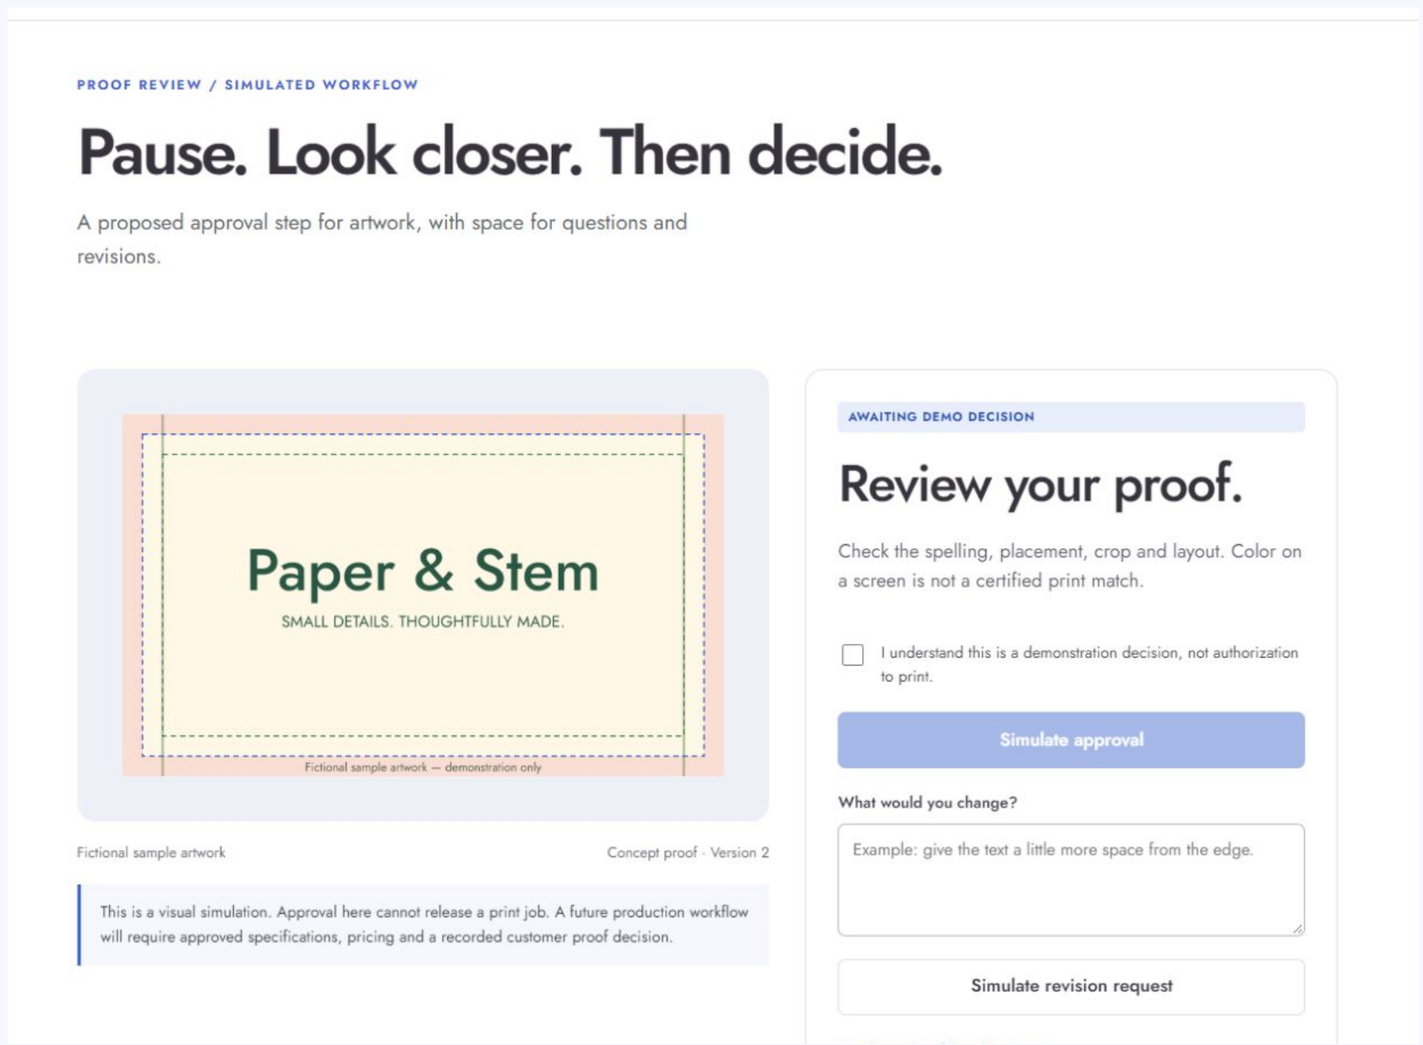

FILL / cover the area by cropping

The same sample measures 240 effective ppi and shows a warning. Check the crop and placement before proceeding.

Sample: 900 × 675 px; 3.5 × 2-inch card plus 0.125-inch bleed on each edge. Extend is simulated. PDF preflight, fonts, color checks and real AI extension are future work. Downloads are watermarked.

WEBSITE CONCEPT / PROPOSED

Proof review / make the decision explicit.

1 A separate review step

Show the artwork, version and a clear decision state.

2 Approve or request changes

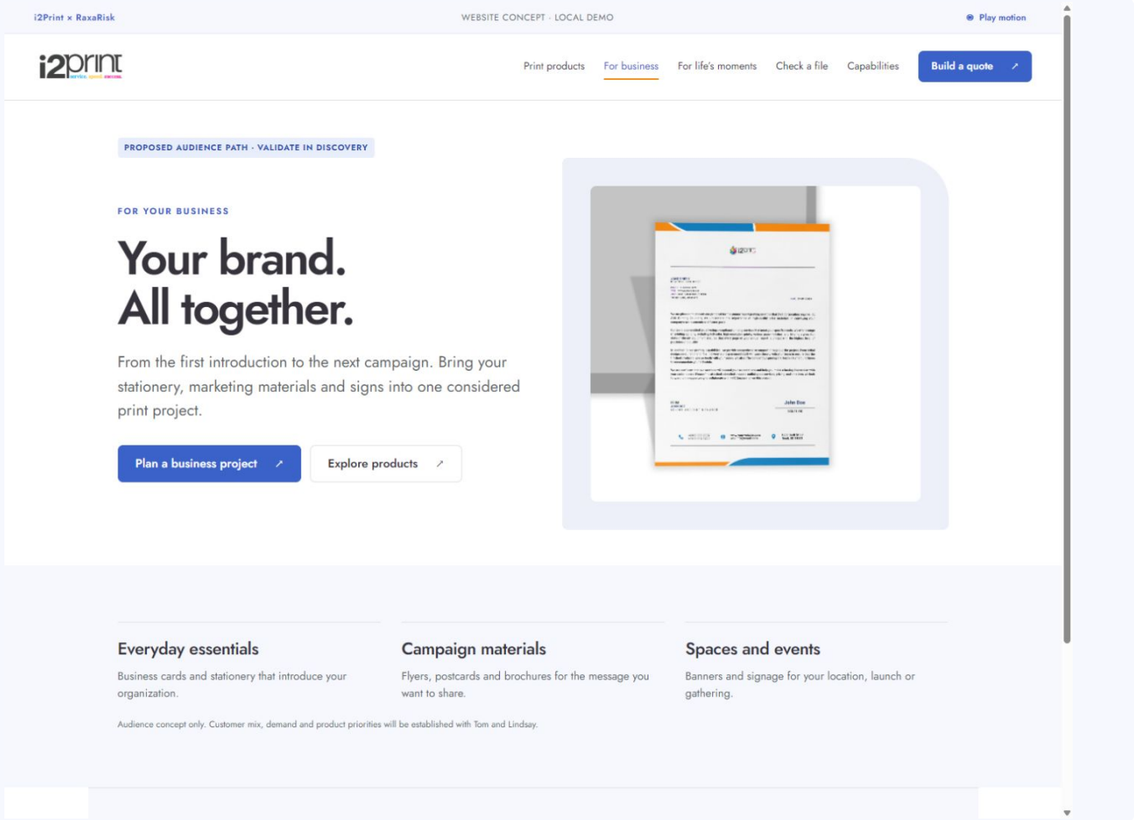

The acknowledgement and revision note are part of the simulated flow.

3 A change resets the decision

New artwork or placement requires another look. These controls cannot authorize production.

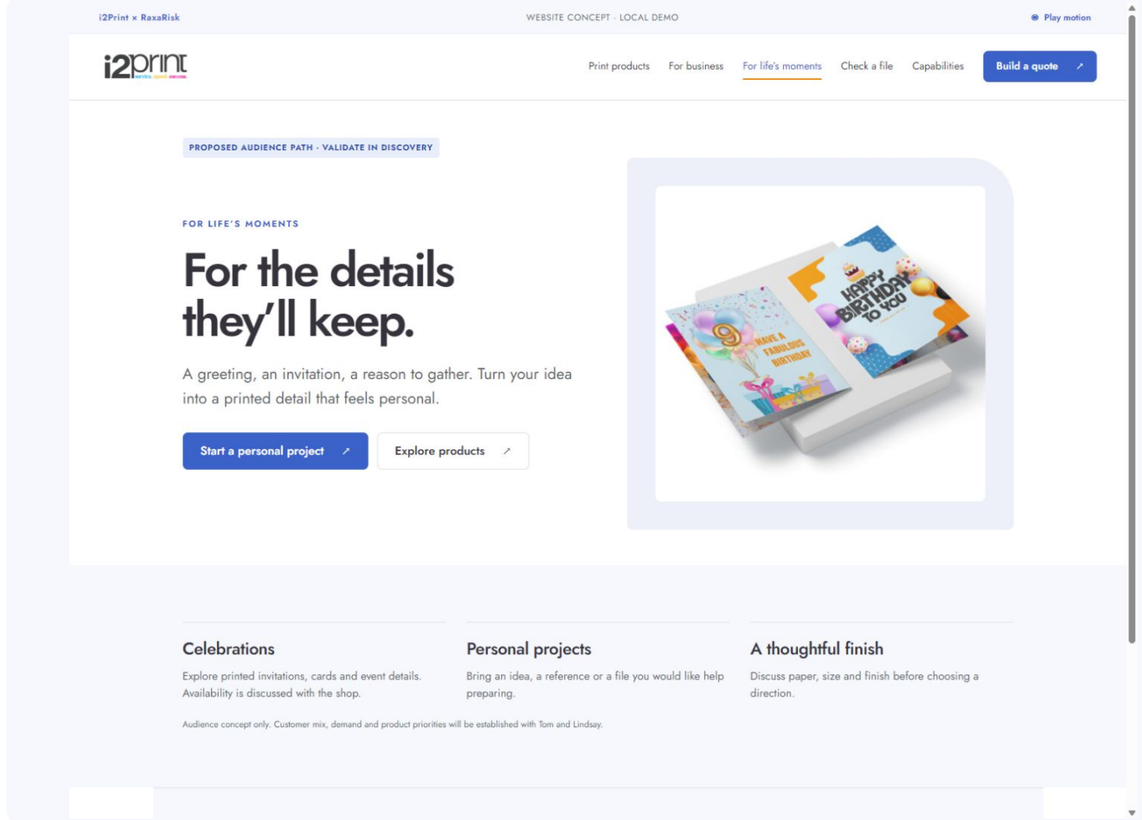

PROPOSED / BUSINESS AND PERSONAL PRINTING

Two audience paths to validate.

Business printing

Explore coordinated brand materials and repeat ordering. Confirm priority industries and typical buying patterns.

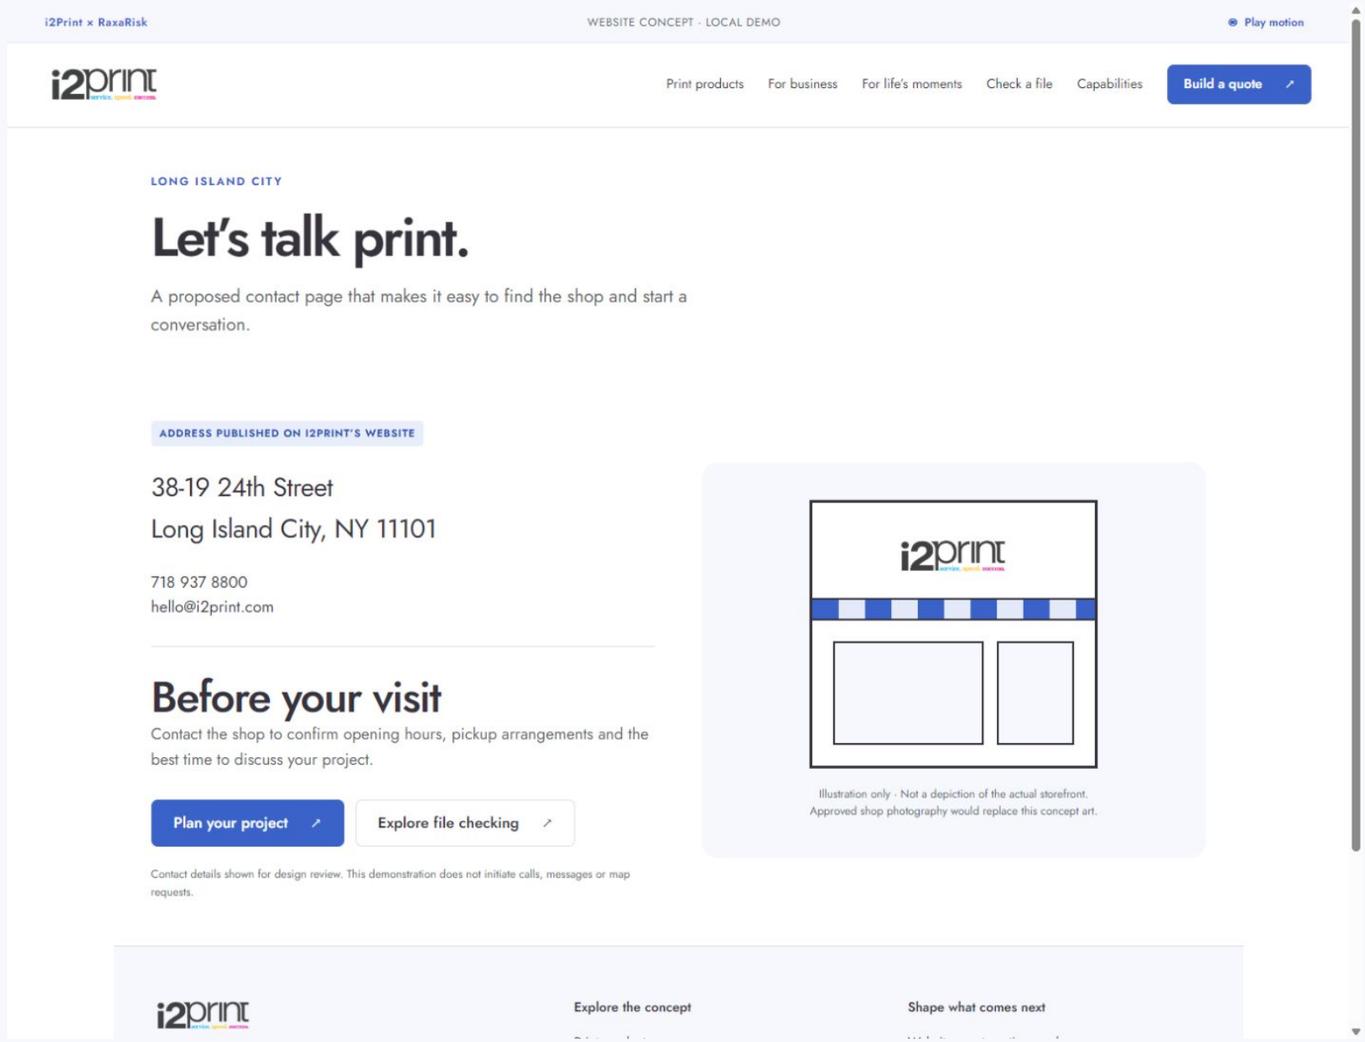

Personal + event printing

Explore occasions, invitations and wedding-related needs. Confirm demand, product fit and whether buyers are direct customers or resellers.

WEBSITE CONCEPT / PROPOSED

The shop / bring the conversation back to people.

1 A welcoming local identity

Long Island City anchors the concept.

2 An honest visual

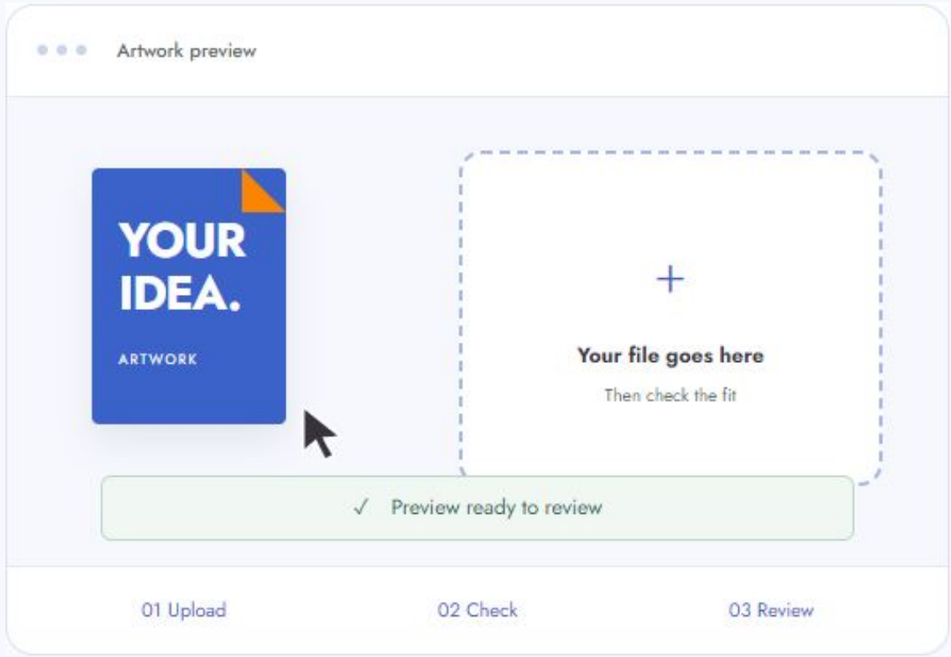

The storefront graphic is an illustration, not a photograph of i2Print.

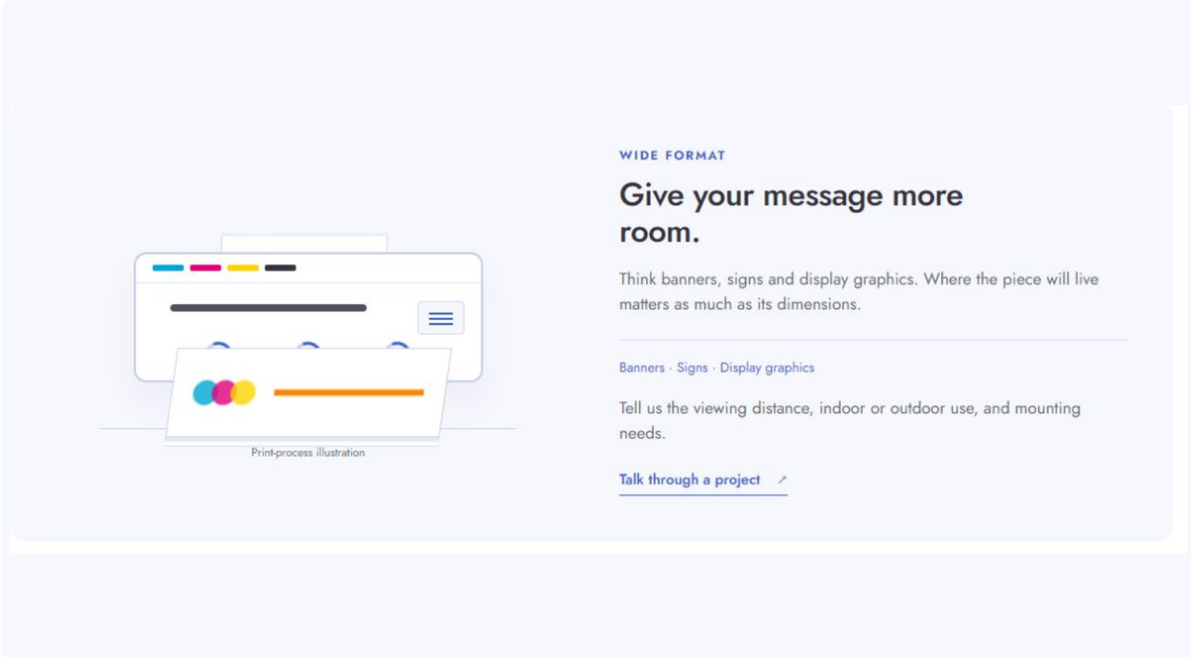

3 Owner-pending

Confirm public contact details, hours, pickup process and approved photography before launch.

ANIMATION / INSPIRED BY THE EXISTING SITE AND CLAUDE CONCEPTS

Motion that explains the next step.

01 / Brand details

Color registration settles into the headline; the color wheel turns once and the printed cards gently move.

02 / Upload, check, review

A file moves into the preview, a scan line crosses the sample, and the review step appears. This is an explanatory illustration.

03 / Inside the process

Paper-feed and roller motion illustrate printing. The capabilities explorer changes the explanation with each selection.

Play/Pause controls all motion. System reduced motion is respected by default; an explicit Play action enables this preview only. Keyboard focus and touch provide access to the same content. PDFs show stills; the local demo shows motion.
